About

A pixel font for modern times

Tecmo is a new take on the old bitmap fonts from the '80s that were everywhere in video games. If you played games like Tetris, OutRun, and Ninja Gaiden, I think you can identify the inspiration. This typography was created at some point in the past and updated in the present to be your next pixel font, with some touches from the classic Grotesks and Sans-Serifs of our time. With 192 glyphs (only in Uppercases) and symbols, Tecmo was designed for maximum legibility and versatility, both on screens and printed materials. Its character system has, in almost its entirety, the same kerning values on both sides of each glyph – which guarantees an immense possibility of pairing.

The “digitalization” of this typeface – in a way that clearly marks its presence in the affective memories of most people – was boosted, reimagining timeless classics in an even more futuristic and brutalist aesthetic.

Tecmo, whose name is a direct reference to a Japanese video game producer from the 80s, has a font pack with 8 styles (Bold, Regular, Light and Thin, and the Italic versions). Each style was meticulously crafted to definitely uplift your next designs, referencing both the analog past and the digital future. Tecmo is an ideal typeface for social media posts or to make an impact on editorial, print, and packaging projects that need to communicate with the future.
